APPLICATION PROGRAMMING INTERFACE (API)

What is an API?

API is an acronym for Application Programming Interface. An API is a software intermediary that can make two software applications talk to each other.

As you can see in the image below, the API's role comes in the middle of the application and server when you send a request to do something.

Why use API for trading?

There are several benefits to using APIs for trading. Here are a few key reasons:

- Automation of Strategy

- Trading happens in quick time

- Access to real time data

- Integration with trading tools

- Customizable in accordance with existing strategy

- Low-cost trades

- Scalability

- Security & reliability
